

ASUTOSH PANDA

📍 Brahmapur, India • ✉ asutosh.pda@gmail.com • 🌐 75asu.pages.dev • 🐙 github.com/75asu • 🔗 [linkedin.com/in/75asu](https://www.linkedin.com/in/75asu)

SKILLS

Infrastructure: Kubernetes (GKE, bare-metal), Docker, Helm, FluxCD, ArgoCD, Terraform, OpenTofu, Ansible, GCP, AWS, Hetzner, OVH, KubeOne, Linkerd, OpenEBS, Cloudflare, Tailscale

Secrets and Auth: GCP Workload Identity Federation, External Secrets Operator (ESO), SOPS, GCP Secret Manager, Ory Stack, Pomerium, cert-manager, zero-trust networking

CI/CD: GitHub Actions, self-hosted ARC runners, Trivy, SonarQube, TruffleHog, Defectdojo, Renovate

Observability: Prometheus, Grafana, Grafana Mimir, Loki, Alertmanager, BetterStack

Development: Golang, Python, Bash, Node.js, TypeScript, PostgreSQL, Linux

PROFESSIONAL EXPERIENCE

ONE2N

Pune, Maharashtra, India

Senior SRE & Team Lead • Client: Fravity AI (Remote)

May 2026 - Present

- Built **fravity-spine**, the production multi-tenant GKE platform: private control plane, CMEK etcd, Workload Identity Federation, OpenTofu across **6** isolated state layers. Replaced bastions and shared SSH with identity-based **kubectrl** via GKE Connect Gateway + Workspace SSO; FluxCD-bootstrapped cert-manager, ESO, Traefik, and Pomerium SSO.
- Delivered the central LGTM observability platform: Mimir + Loki + Tempo (GCS-backed via Workload Identity, **365-day** metrics/logs + **30-day** traces, multi-tenant via X-Scope-OrgID) as authenticated public ingest. Migrated to grafana/alloy single-agent (logs, metrics, traces) on spine and the new fravity-dev1 spoke; Alertmanager + Slack via ESO; grafana-operator CRDs for dashboards-as-code.
- Stood up a **5-tool** SAST stack on self-hosted ARC runners (Trivy operator, SonarQube CE, renovate-operator, TruffleHog) to meet the "scans inside our private GKE" audit bar. Shipped **scan-aggregator**, a FastAPI webhook service that normalises **7** scanner outputs to a per-repo audit xlsx; first customer-facing deliverable: Socure security review with **76** H/C findings across **4** images.
- Audited GCP IAM/IaC/cost across **5** projects; surfaced **19** SA keys, an unowned **32-vCPU** instance, and **~\$26,520/yr** in zombie spend. Bootstrapped IaC for **2** additional envs to **60%** coverage; migrated **10** workload SAs + all human IAM to Terraform; rebuilt CI on Workload Identity Federation. Owned permanent-fix postmortems (flux_bootstrap_git race; Flux Kustomization circular-wait deadlock). Authored the Q2 SRE roadmap and lead a **2-engineer** team.
- Replatformed staging from a VM onto **fravity-dev1** GKE: product stack live via Flux HelmRelease from a private OCI chart registry, **zero static credentials** (Workload Identity end-to-end), per-app least-privilege GSAs, ESO-synced secrets, **5** GitOps tiers. Root-caused the rollout's stacked failures (chart-default HPA runaway, cgroup OOMs, allowlist-bound DB networking) and upstreamed the chart fix. Stood up VaultWarden and Outline on spine behind Pomerium SSO.

LUXOR TECHNOLOGY

Seattle, WA, US

DevOps Engineer (Remote)

June 2023 - April 2026

- Operated a multi-cluster Kubernetes platform for **20+** teams and **3,000+** enterprise customers: **8+** clusters across Hetzner, OVH, and GCP with **24/7** uptime for L1/L2 validator and RPC workloads (BTC, LTC, Zcash, Stacks, tBTC), including **2** bare-metal HA clusters (KubeOne, OpenEBS). Standardised on a **7-layer** FluxCD GitOps pipeline with Linkerd mTLS; migrated **70+** SOPS secrets to GCP Workload Identity.
- Led incident response for a Litecoin mainnet hard fork: cross-team build, **zero-downtime** rolling deployment across production, postmortem. Restored production after a kubelet TLS expiry on bare metal; deployed x509 monitoring across **10** clusters with **7-day/24-hour** PromQL alerts.
- Owned CI/CD for **50+** repositories on self-hosted ARC runners. Ported a failing Playwright E2E suite from Mac hosted runners (**\$5,000/mo**) to Linux ARC, cutting runtime **40 to 15 min** and cost to **\$600/mo**. Built code-signed Windows + Mac release pipelines and automated FluxCD deployments to GCP Artifact Registry.
- Built org-wide platform tooling: **KubeOrbit** (Go CLI for kubeconfig provisioning across **20+** clusters) and **Memphis** (Python SOC1/2/SOX compliance binary with auditor-ready Drive reports + Linear escalation; solo, **4 weeks** for the planned IPO). Prevented a supply-chain compromise by vendoring Trivy into a composite action across **9** repos; when CVE-2026-33634 later hit aquasecurity/trivy-action, Luxor pipelines were untouched.
- Proposed and built **BVT**, the org's first zero-hardcoded-secrets cluster: replaced SOPS-in-git with ESO + GCP Secret Manager + Workload Identity Federation; the pattern became the gold standard adopted for new clusters. Authored custom Python tooling against Hetzner + OVH firewall APIs to enable secure cross-cloud peering for bare-metal nodes where no Terraform modules existed.

TATA CONSULTANCY SERVICES

Hyderabad, Telangana, India

Systems Engineer (Remote)

October 2020 - June 2023

- Built automation serving **120** cross-functional teams; orchestrated migration of **2,500+** repositories from GitLab, Bitbucket, and SVN to GitHub Enterprise across **4** VCS platforms, saving **15 weeks** of manual labour.
- Built **6** PowerShell scripts (**300 man-hours/month** saved), Python automation for Oracle DB replication and RHEL/WebLogic health checks across **22** servers (**80 hours/month**), and a Golang CLI cutting HP storage allocation from **30 man-hours** to one command.

SIDE PROJECTS

- Frit** (May 2026 - Present) 📄 - OSS GPU SRE runbook for vLLM on bare metal: DCGM, NVIDIA gpu-operator, MIG, SLOs, chaos drills.
- Kiln** (May 2026 - Present) 📄 - Per-job Linux sandbox API: cgroups, network namespaces, seccomp for untrusted job execution.
- Platform Zero** (Apr 2026 - Present) 📄 - **4** SRE labs (k8slab, ansiblelab, awslab, geplab); **0-to-100** in one command.
- Truss** (Mar 2026 - Present) 📄 - Self-hostable BaaS for indie hackers: auth, storage, feature flags, realtime; **4** on waitlist.
- Dint** (Apr 2026 - Present) 📄 - Embeddable user-feedback SaaS: one widget powers boards, roadmap, changelog, status, NPS.

TEACHING EXPERIENCE

- Full-Stack Instructor, **4** cohorts (2022-2025), taught NextJS, FastAPI, and DevOps to BSc CS students.

EDUCATION

SASTRA DEEMED UNIVERSITY

Master of Computer Applications (MCA) - Chennai, India - 2021 - 2023
