ASUTOSH PANDA

Brahmapur, India • asutosh.pda@gmail.com • https://linkedin.com/in/75asu • https://75asu.pages.dev • https://github.com/75asu

SKILLS

GPU & AI Infrastructure: NVIDIA GPU Operator, DCGM, CUDA, vLLM, llm-d, KubeRay/Ray Serve, LiteLLM, APISIX, Envoy AI Gateway, P/D disaggregation, prefix-aware routing, inference serving (TTFT/TPOT, goodput), guidellm benchmarking, Amazon Bedrock
Kubernetes & Infrastructure: Kubernetes (GKE, EKS, bare-metal / data centre), Helm, Kustomize, FluxCD, ArgoCD, Terraform/OpenTofu, Terragrunt, Ansible, Karpenter, AWS Transit Gateway, Istio, Linkerd, external-dns, Bottlerocket, GCP, AWS, Cloudflare, Hetzner, OVH
Observability & Reliability: Datadog, Prometheus, Grafana, Mimir, Grafana Alloy, OpenTelemetry/OTLP, Loki, Tempo, Jaeger, Perses, VictoriaMetrics, VictoriaLogs, VictoriaTraces, vmalert, Alertmanager, SLOs and error budgets, on-call and incident response
CI/CD, Secrets and Access: GitHub Actions, self-hosted ARC runners, trunk-based release and rollback; Workload Identity Federation, GHE OIDC, IRSA + EKS Pod Identity, External Secrets Operator, cert-manager, Pomerium, Cloudflare Zero Trust, GKE Connect Gateway
Development & Data: Golang, Python, Bash, PostgreSQL, CloudNativePG, Aurora, ElastiCache, Starrocks, Redis, DMS, Pub/Sub, Linux

PROFESSIONAL EXPERIENCE

Socure Chennai, India
Senior Site Reliability Engineer (Remote) *August 2026 - Present*

- Took ownership of moving a GCP-only product onto Socure's AWS platform with no agreed path: **70** repos in under **5** days, dev live **4** weeks in, and a readiness checklist after finding **6** of **7** first-day defects passed every probe.
- Run and tune the GPU inference platform on EKS (vLLM, Ray Serve, llm-d): **~527K** requests/day at FP8, GPUs halved by fixing an fp32 assumption; own its KEDA and Karpenter scaling after finding consolidation evicting the only node that fit.
- Run and maintain the inherited SoDA AI assistant on Bedrock: data-egress actions pause for human approval in durable workflows and tools run in isolated workers; restored it when its model reached end of life and traced runaway token spend to the tool loop (fix in review).
- Built observability for a platform that arrived with none: agreed the contract with org SRE, got collection into every environment with production in Terraform, and a baseline new workloads inherit that exposed **10** of **11** dead-letter queues unwatched.
- Made availability measurable and acted on it: the first SLO put dev at **95.89%** against **99.9%**, traced to single-replica services and a liveness probe killing healthy pods; fixed both in dev and designed the production paging chain.
- Took a self-hosted Superset from request to a Security-cleared POC in **10** days by settling what "read-only" means: password-less cross-account access, a role proved SELECT-only on every table, egress locked down, and a repeatable path for the next team's database.
- Own the release path for **4** services: self-service deploys with a hotfix and rollback lane proven in production **3** times, and **3** critical container findings closed by proving the headline one was a build artefact.

One2N Pune, Maharashtra, India
SRE Lead · Client: Fravity AI (Remote) *May 2026 - July 2026*

- Built the org's first observability stack, then re-platformed it off AGPL onto VictoriaMetrics on a founder licence call: a dual-run Alloy fleet moved **~305K** series from **192** targets in **4** clusters with no data-loss window, and metrics, logs, traces and alerts behind one Perses view.
- Built fravity-spine, the internal Kubernetes platform other teams consume: private regional GKE, CMEK etcd, Workload Identity, CloudNativePG, OpenTofu across **6** state layers, and identity-based kubectl retiring bastions and shared SSH.
- Led cost + access governance across **5** GCP + **5** AWS accounts as lead of a two-person SRE team: surfaced **19** live SA keys and **~$26,520/yr** of list-price exposure, then shipped an org-wide FinOps board and IAM as Terraform on keyless CI.
- Designed the unified release pipeline, prototyped on dev1 staging: one Helm chart for every environment, Flux image automation so release control stays in the GitOps repo rather than app CI anyone can edit, per-environment projects, and **7** per-app identities.

Luxor Technology Seattle, WA, US
DevOps Engineer (Remote) *June 2023 - April 2026*

- Operated a multi-cluster Kubernetes platform for **20+** teams and **3,000+** enterprise customers: **8+** clusters across Hetzner, OVH, and GCP with **24/7** uptime for L1/L2 validator and RPC workloads, including **2** Hetzner bare-metal HA clusters (KubeOne, OpenEBS) built from scratch. Standardised on a **7**-layer FluxCD GitOps pipeline with Linkerd mTLS, migrating **70+** secrets to Workload Identity.
- Led incident response for a Litecoin mainnet hard fork: cross-team build, zero-downtime rolling deployment, postmortem. Restored production after a kubelet TLS expiry on bare metal, then shipped x509 monitoring across **10** clusters on **7**-day and **24**-hour PromQL alerts.
- Owned CI/CD for **50+** repositories on self-hosted ARC runners. Ported a failing Playwright E2E suite from Mac hosted runners (**$5,000/mo**) to Linux ARC, cutting runtime **40 to 15 min** and cost to **$600/mo**. Built code-signed Windows and Mac release pipelines on FluxCD.

Tata Consultancy Services Hyderabad, Telangana, India
Systems Engineer (Remote) *October 2020 - June 2023*

- Migrated **2,500+** repositories (GitLab, Bitbucket, SVN) to GitHub Enterprise for **120** teams and built their CI/CD pipelines, resolving self-hosted-API pagination limits across the platforms and saving **15 weeks** of manual effort.
- Built PowerShell, Python and Golang automation across **22** RHEL/WebLogic servers: monitoring, alerting, Oracle replication, and a storage-provisioning CLI that collapsed **30** man-hours of monthly tickets into one command, saving **380+** man-hours/month.

OPEN-SOURCE PROJECTS

- **Truss** (June 2026 - Present) - Self-hosted backend: **K8s operator**, signed releases, **SLO** burn-rate alerts, **MCP server**.
- **ducat** (June 2026 - Present) - **Prometheus** cost exporter: **AWS**, **GCP**, GitHub, Cloudflare to FOCUS; Helm, Grafana.
- **Frit** (May 2026 - Present) - GPU SRE lab: **Ray Serve** + **vLLM** on k3s/Flux; guidellm **TTFT/TPOT** sweeps on an L4.

TEACHING EXPERIENCE

- Full-Stack Instructor, **4** cohorts (2022-2026), taught NextJS, FastAPI, and DevOps to BSc CS students.

EDUCATION

SASTRA Deemed University *Master of Computer Applications (MCA) - Chennai, India - 2021 - 2023*
